DETAILED ACTION

Drawings

 This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham v. John Deere Co.*, 148 USPQ 459, that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or unobviousness.
- 4. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muraishi (USP 5,154,889) in view of Kitagawa et al. (USP 4,629,862).

Muraishi discloses an automatic device for incubating samples substantially as claimed. The device comprises a platform for supporting a plurality of samples, a plurality of independent heaters 71 positioned on the platform for providing heat to the

Application/Control Number: 09/032,676 Art Unit: 1743

samples (figures 1 and 6, and column 6, lines 32-48). The moving platform is taught by Muraishi at figures 10 and 11. Muraishi fails to specifically recite a user interface mounted off the platform for the communication with a temperature controller electronic circuit of the heaters. Kitagawa et al. teach an incubator having a user interface 14 which is positioned off the platform and connected to the heater for controlling the temperature of the incubator (figures 1 and 6).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided the device of Muraishi with a user interface mounted off the platform, as taught by Kitagawa et al., since such a user interface is considered conventional in the art and is required in order to control the temperature of the incubator.

With respect to the group of wires, it would have been an obvious matter of design choice to provide the device of Muraishi with a particular number of wires, since applicant has not disclosed that such a recited group of wires solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with any particular group of wires depending on a particular heating application.

Conclusion

- 5. No claims are allowed.
- 6. References: Janson, Rogers et al., Kledzik et al., Kerr et al., Houdy et al., Kureshy et al., Niori et al., Arai et al., Miller, and Copeland et al. are cited as art of interest for the teachings of incubators.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Long V. Le whose telephone number is (703) 305-3399.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0651.
